

WINDOWS

Introduction:-Windows is a graphics user interface (G.U.I) program. It work on the theory of WYSIWYG (What you see is what you get)

Interface:-An interface acts as a link.

User interface:-This interface provides the facility to make a link between the user and computer.

History of windows:-Microsoft Corporation started work on developing a graphical user interface (G.U.I.) for P.C.S. (Personal Computer System) in the year 1983. Microsoft come out with a few version of windows such as windows 1, windows 2, and windows 386 during the Year 1985-1988. However, these versions did not become popular as the software was not very powerful.

Windows 3 announced in the year 1990 was the first windows programme that was accepted by the user and the software developers on large scale.

Windows announced in the year 1992 the enhanced and updated version of window 3, windows 3.1, was not a successful operating system. It was just only a program that runs over dos.

There are various windows which are as given below
